

counting

## Counting unit

- Range and equipment allowing decorative topping on products such as : chocolate chips, whole dried fruits or fragments, sweets ..., on pastries, confectionery, cheese products.
- This equipment allows decorative products to be settled simultaneously on 30 adjacent supports.
- Line width up to 1.5 metres.
- This equipment was developed to be adapted perfectly to industrial requirements (production rates, deposit accuracy ...)
- Products are spread out homogeneously.
- Depositing on a specific, defined surface unit, enables real savings that can be done on raw materials and therefore gives quick investment return.
